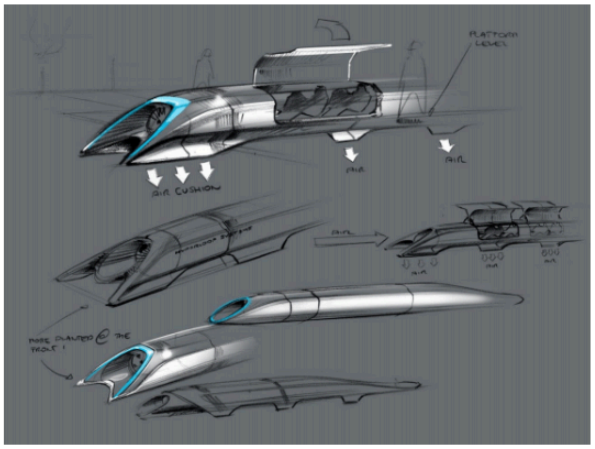
ABOUT US

We are a team of 25+ zealous undergraduate engineers from several disciplines of IIT Delhi working together to empower this world with another mode of transportation technology.

We are a team of 25+ zealous undergraduate engineers from across disciplines at IIT Delhi, working together to reimagine transportation through Hyperloop, the fifth mode of transportation.

We Are Creative And Awesome

Our team believes in diligence, discipline, hard work, and learning. We are committed to promoting interdisciplinary exchanges of knowledge and ideas. As part of our mission, we intend to develop an autonomous scalable pod and develop new technologies to facilitate the commercialization of the hyperloop system. Currently, we are working in the institute's laboratory. Being the latest addition to the technical clubs of IIT Delhi, we are looking for tech enthusiasts ready to take the hyperloop industry to the next level. We have a team of experienced faculty advisors, and innovative engineers prepared to take transportation technology to new heights.



Our team strives to blend technical acumen with focus on diligence, discipline and perseverance to drive innovation using the Triple Helix model, where we continuously work on exchange of interdisciplinary knowledge from academia to meet the needs of industry with the support of government. Having achieved levitation recently that our team showcased at GHC IIT-M 2026, we are committed to develop an autonomous scalable pod and develop associated innovation technologies to facilitate the commercialization of the hyperloop system. We are based in State of the Art Research & Innovation Park, IIT Delhi. Having won the best club award for the year 2024, we invite tech enthusiasts ready to take the hyperloop industry to the level of industrial roll out. We are handheld by a team of experienced faculty advisors, and innovative engineers prepared to take transportation technology to the new heights.

COMPETITIONS - Needs discussion JaiRam G

OUR COMPETITIONS

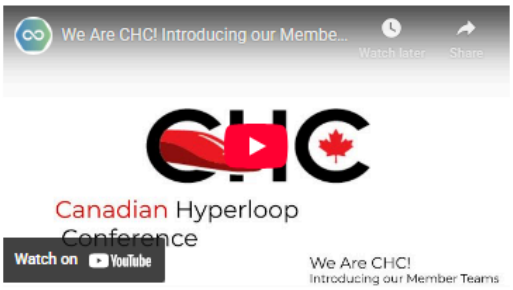
European Hyperloop Conference

The European Hyperloop Week is an annual international event dedicated to the 'transport of the future', the Hyperloop. This event enables university students, guest speakers, companies, and hyperloop enthusiasts to discuss the technology, feasibility, and scalability of the Hyperloop.

Canadian Hyperloop Conference(CHC):-

The annual Canadian Hyperloop Conference is dedicated to developing the technologies and policies required for a fully functioning Hyperloop pod and track, by:

- Encouraging the development and concrete demonstration of Hyperloop technology by challenging student teams in an annual pod demo - the Canadian Hyperloop Competition.
- Developing a sense of community by hosting knowledge-sharing events, research, and industry speakers, and a social media presence appealing to the general public.

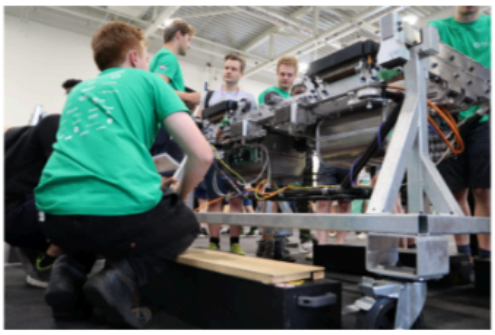


Our Events

OUR EVENTTS

EHW'23

EHW or the European Hyperloop Week 2023 is a hyperloop competition that provides an international platform to all Hyperloop teams across the globe to present their pods and their contribution towards this new mode of transportation. Our team, Infinity Hyperloop worked extremely hard for this and have been selected as one the finalists teams in this competition. EHW 2023 would take place in Edinburgh, Scotland where our team has been invited to represent ourselves and IIT Delhi. The competition not only gives the teams a chance to present their work, but also is a ground for a variety of speaker sessions, student panel discussions, and technical creativity so that the future of transportation can be achieved soon!



NAIR

It is a moment of much celebration for Infinity Hyperloop, as we were specially invited by the National Academy of Indian Railways to attend an exceptional

GLOBAL HYPERLOOP COMPETITION 2026

IIT Madras organised the Global Hyperloop Competition 2.0 (Asia's first) that saw over 200 participants. GHC is one of its kind in bringing all stakeholders together for revolutionizing next-generation transportation. With an upgraded track of 422 metres, GHC saw teams showcasing their innovation. GHC had on its panel a jury with diverse backgrounds from Academics and the Industry. Infinity Hyperloop (IIT Delhi) participated under DesignX category and won Best Levitation and Stabilization Award . Our solution demonstrated a fine balance of theoretical modeling, simulations, and practical feasibility. The Jury appreciated the robustness, safety considerations, and scalability of the proposed design. This achievement highlights IIT Delhi's growing footprint in next-generation transportation research. Infinity Hyperloop's performance reaffirmed the institute's culture of interdisciplinary collaboration and innovation.

SECTION 3: TECHNICAL VERTICALS

(Please create a dedicated section or carousel for each vertical below.

1. Mechanical Subsystems

- **Tagline:** Engineering the backbone of hyper-speed.
- **Main Description:**
  The Mechanical Subsystem is the ironclad skeleton of the pod, engineered to tame the chaos of high-speed travel. From the adaptive vertical suspension that swallows track imperfections to the magnetic braking mechanisms that deliver relentless stopping power, these systems work in perfect harmony. With an aerodynamic shell slicing through resistance and a chassis built for pure structural dominance, we ensure the ride is as safe as it is thrilling.
- **Key Features:**
  - Vertical and Linear Stability Control
  - Magnetic Eddy Current Braking
  - Precise control for safe deceleration
  - Unparalleled Structural Integrity
- **Visual Assets:**
  - ChatGPT Image Jan 12, 2026, 06_12_11 PM.png
  - ChatGPT Image Jan 12, 2026, 06_16_06 PM.png

---

2. Hyperloop Aerodynamics

- **Tagline:** Unlocking the power of airflow.
- **Main Description:**
  We don't just move through air; we master it. Our aerodynamics team combines cutting-edge airflow science with precision engineering to carve the perfect path forward. By unlocking unprecedented speed and efficiency through rigorous simulation, we are paving the way for a cleaner, smarter, and faster world. This is where sustainability meets the sound barrier.
- **Key Features:**
  - Cutting-edge designs to reduce air resistance
  - Advanced airflow simulations and testing
  - Optimising pod shapes for maximum efficiency and speed

- **Visual Assets:**
  - Screenshot 2026-01-12 at 18.41.16.png
  - Screenshot 2026-01-12 at 18.40.46.png

---

3. Power System

- **Tagline:** The high-voltage lifeline of the pod.
- **Main Description:**
  This is the beating heart of the machine. Serving as the central hub for energy storage and intelligent distribution, our Power System is built on a modular architecture of pure endurance. With a sophisticated Battery Management System (BMS) that vigilantly balances every volt and degree of temperature, we ensure maximum performance and lifespan. It's not just a battery; it's a smart energy fortress.
- **Key Features:**
  - 400V, 40A rated
  - 12s2p stack, modular design
  - Custom Designed BMS (Battery Management System)
  - Master - Slave Topology
- **Visual Assets:**
  - Screenshot 2026-01-12 at 18.46.37.png
  - *ChatGPT Image Jan 12, 2026, 06_45_27 PM.png*

---

4. Sense and Control

- **Tagline:** The brain behind the velocity.
- **Main Description:**
  Speed is nothing without control. Our Sense and Control unit is the digital nervous system, ensuring a seamless transition between pod states. By utilising a decentralised architecture and robust emergency circuits, we eliminate single

points of failure. It coordinates every microsecond of the journey, delivering a transportation experience that is safe, efficient, and intelligently automated.

- **Key Features:**
  - 4 Tangible Pod States
  - Robust Emergency Circuit
  - Dedicated Brakes and Propulsion ECU
- **Visual Assets:**
  - *Screenshot 2026-01-12 at 18.53.38.png*
  - *Screenshot 2026-01-12 at 18.58.41.png*

---

5. Propulsion System

- **Tagline:** Frictionless flight, environmentally fueled.
- **Main Description:**
  Forget combustion; this is the future of thrust. Our propulsion system utilises Linear Induction Motors (LIM) to achieve frictionless, contactless acceleration. Designed in-house for massive thrust capacity, this environmentally friendly powerhouse is capable of rapid acceleration and deceleration. It is the optimal solution for levitated travel, pushing the boundaries of what an electric motor can do.
- **Key Features:**
  - 1 kW Double-Sided LIM Power Stage
  - In-House Manufactured
  - Custom Motor Controller
- **Visual Assets:**
  - *Screenshot 2026-01-12 at 19.00.41.png*
  - *Screenshot 2026-01-12 at 18.57.17.png*

---

6. Levitation

- **Tagline:** Defying gravity, defining efficiency.
- **Main Description:**
  We are eliminating the oldest enemy of speed: friction. By utilising Hybrid Electromagnetic Suspension (HEMS), we lift the pod effortlessly using high-strength permanent magnets assisted by electromagnets for precise controllability. This approach slashes manufacturing costs while maximising power efficiency, proving that the future of travel doesn't roll—it floats.
- **Key Features:**
  - Power Efficient
  - Automated gap control
  - Continuous safety monitoring
- **Visual Assets:**
  - *Screenshot 2026-01-12 at 19.05.48.png*
  - *20260113_203243.heic*
